## (54) Gangway arrangement

(57) A gangway arrangement comprising a longitudinal bracing means (10) which forms support means for a series of gangway sections (23) having associated rail-forming side members (21, 22). The gangway sections (23) are connected to the bracing means (10) via support members (19, 20) which are displaceably mounted on the same. The support means (19, 20) are fixable in different arbitrary positions on the bracing means (10). The gangway sections (23) with associated rail-forming side members (21, 22) and support members (19, 20) are telescopically collapsible on the bracing means (10).
